WINTER / SPRING 2010 PROGRAM

Restoring Dental Implants: A General Dentist's Guide

SATURDAY APRIL 10, 2010, 8:30 AM – 4:50 PM (7 LECTURE CREDIT HOURS)
UPDATED FOR 2010!

This course, which is directed to the general dentist, hygienist, and staff, is a review of the implant treatment planning and implant restoration solutions available today. There will be a comprehensive discussion of each type of restoration design (single tooth, crown and bridge, hybrid, and overdentures). In addition to the clinical steps for success, other topics openly addressed will include lab fees, length of treatment, complications, and maintenance. The main goal of this course is to provide the clinician and staff with a strong background in implant treatment planning to meet the growing patient demand and interest, which has increased exponentially in recent years and is expected to boom in the coming years. Advanced topics such as anterior esthetics and CAD/CAM technology will be touched upon as well.

THIS COURSE WILL ENABLE PARTICIPANTS TO:

- Feel more comfortable treatment planning and executing implant dentistry.
- Be better prepared to explain and discuss implant options, treatment time, and costs among themselves and with patients.

FACULTY

DANIEL KUBIKIAN, DMD

Dr. Kubikian is Clinical Assistant Professor of Periodontics at Penn Dental Medicine. He holds a DMD and postgraduate certificate in periodontics and periodontal prosthesis from Penn Dental Medicine, and is a Diplomate of the American Board of Periodontology.
