

Implant Overdenture- Mandible

Background: RK complained about difficulty chewing and needed stability with dental implants. RK did not want the denture to have any movement, that's why 4 implants were required in the front and back of the mouth.

Implant Overdenture

Testimonial: "Before I came to Dr. Kubikian's office, I had problems chewing, keeping my teeth in place and even smiling. Now that the procedure is all done, my teeth are perfectly in place, perfectly aligned, perfect to chew with and I smile as often as I can, as much as I can. Thank you Dr. Kubikian!"
