

Implant #8 with Crown

Background: E.I. had internal resorption on her front tooth. Even though she was unaware of her problem, her front tooth had to be extracted. Her implant was placed the same day as the extraction. She was willing to wear a “flipper” while the implant integrated.

Testimonial: “Thank you for a beautiful tooth! I am thrilled with the end result and the process was so much easier than I thought it would be.” E.I.- Chadds Ford, PA
