

# Full Arch Implant Supported Bridge #2-#15

**Background:** N.T. had a previous tooth supported bridge which had failed because of cavities on her crowned teeth. She wanted to have crowns again, but wanted implants for a life-time solution. During treatment, Nancy required different procedures, ask Dr. Kubikian about more in-depth information

**Testimonial:** "My dental implant experience with Dr. Kubikian was excellent. The implants I was receiving was for the entire upper bridge and at the same time, I had to have a temporary bridge during the entire period. Dr. Kubikian designed the placement of the temporary bridge and permanent implants so the transition from one to the other was smooth and seamless. He was meticulous and precise with each step of the long process from beginning to end. I did not experience any problems with the surgery, placing of the implants, or the final bridge. Dr. Kubikian explained clearly every step along the way so I understood and felt confident. My overall assessment is that Dr. Kubikian did an outstanding job of design and implementation in providing me with a complete set of dental implants and upper bridge. I recommend him highly and strongly."
